WATER TANK CLEANER

Save Time, Save Money & Save Life...!!!

USER MANUAL

Roof & ridge cleaning brush, which can be used to clean top roof ridge of water tank and water tank cover. This brush can be used as a basin, sink cleaner as well.

Corner & edge cleaning brush, which can be connected with extendable pole handle by snap fit button and can clean the side wall and bottom of water tank. Allow the sediments, dirt & debris to be settle down before perform water tank cleaning. This brush can be used for webcomp cleaner for home cleaning as well.

Now can join the handle to the brush head by snap fit button. Open the valve, fill water in house pipe & close the valve when water is full. With the function of a non-return valve, the water filled in the hose, does not return to the tank.

Microfibre mop for mopping the surface of the water tank which ensuring to drain the last drop from the tank and it can be a multipurpose mop for home floor cleaning as well.

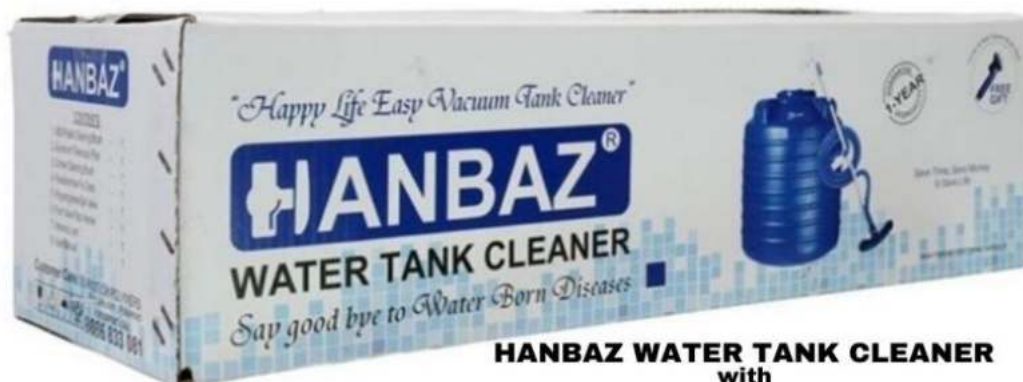

Ensure water tank should contain minimum half a tank of water. The more water, the better as the pressure generated inside the device to take out the sediments will be more when the water is more. Insert the brush head in to the tank. The valve at the hose pipe end should be placed lower than the tank bottom level. Open the valve at the other end. Move the brush slowly in a rotating sequence from one place to another while the dust is sucking out. Repeat the procedure. If dust is shaken completely. Wait for the dust & debris to settle again. Using the brush head and clean the bottom of the tank to remove dirt and debris. The dirt will automatically get drained out now. If your water tank has not been cleaned for the last six months to twelve months, we advise that you clean the debris manually first, since it would require intense cleaning. After this, the subsequent cleaning can be done by the hanbaz water tank cleaner every two months. Note: if the water in your tank is below 1/4 level, then try to fill it up to 3/4 level, then brush the sides and bottom parts and wait for the debris to settle down to start cleaning.

ATTENTION

1. Keep more (>3/4) water in the beginning.
2. Outside valve should be kept below the bottom level of the water tank (Pic 6).
3. Brush gently and slowly.
4. If you haven't cleaned your water tank long time it may have stubborn stains which you need to manually scrub while cleaning the first side.
